

Case Study

Warren Distribution

Warren distribution is a privately owned manufacturer, marketer and distributor of automotive aftermarket products, spanning lubricants and chemicals, accessories and repair parts. Headquartered in Omaha, Nebraska, the company, founded in 1922, is committed to continuous improvement in understanding what will make their customers successful – and then providing differentiated, value-added products and services that will exceed customers' expectations.

Desired Business Outcome

- Warren distribution wanted to move their files out of an AS/400 system and move to a platform capable of content management, consolidating for more freedom and flexibility. SharePoint was able to provide better collaboration and search, and it integrates with their office productivity apps.

"Warren distribution for some time has used AS/400 for document management and was looking for a better alternative for capture and retrieval of content."

ACTS' Business Outcome Delivery Approach

ACTS used their business outcome methodology (BOM) as a guide throughout the development of this solution for Warren distribution to keep the focus on achieving targeted business results customized to the client's unique environment.

Warren Distribution Employees

"In working with ACTS, they were able to help design a migration path from our previous document management systems in our AS/400 platform to SharePoint 2013. This has helped Warren distribution in not only ingesting this data but a better mechanism for search and retrieval to help with productivity of our accounting department."

Mike Juhlin

Director of Accounting, Warren Distribution

Solution

Warren distribution was not yet using SharePoint, and ACTS migrated all of their documents from an AS/400 imaging system to SharePoint 2013. ACTS also executed branding and user- friendly design to assure pain-free, successful user adoption.

ACTS executed the migration from a Kodak imaging system and a product called ImageViewer. Successfully executing the migration with a product ACTS developed called ShareMigration, all of the content was migrated into SharePoint 2013 in order to automate Warren Distribution's Accounts Payable workflow process. The new system and documents still work with the company's AS/400 accounting system, but the documents are now in SharePoint 2013.

Benefits

ACTS' powerful ShareMigration application enables ACTS to execute migrations from FileNet, DocuShare, Papervision, Fortis, AS/400 ImageViewer, Kodak, and many other systems to SharePoint. It supports incremental migrations, routing, and many other advanced features, providing substantial proprietary prowess to ACTS' capabilities in these areas.

"ACTS also helped us with providing compliance around the documents with record management capabilities based on our content dates." – Mike Juhlin
